Interactive Artifacts and Furniture Supporting Collaborative Work and Learning

COMPUTER-SUPPORTED - LEARNING

VOLUME 10

Series Editor:

Chris Hoadley, *Pennsylvania State University, Pennsylvania, USA*
Naomi Miyake, *Chukyo University, Aichi, Japan*

Editorial Board:

Michael Baker, *CNRS & Université Lumière Lyon, France*
Carl Bereiter, *Ontario Institute for Studies in Education, Canada*
Yrjö Engeström, *University of Helsinki, Finland*
Gerhard Fischer, *University of Colorado, U.S.A.*
H. Ulrich Hoppe, *University of Duisburg-Essen, Germany*
Timothy Koschmann, *Southern Illinois University, U.S.A.*
Claire O'Malley, *University of Nottingham, U.K.*
Roy Pea, *SRI International, U.S.A.*
Clotilde Pontecorovo, *University 'La Sapienza', Italy*
Jeremy Roschelle, *SRI International, U.S.A.*
Daniel Suthers, *University of Hawaii, U.S.A.*

The *Computer-Supported Collaborative Learning Book Series* is for people working in the CSCL field. The scope of the series extends to 'collaborative learning' in its broadest sense; the term is used for situations ranging from two individuals performing a task together, during a short period of time, to groups of 200 students following the same course and interacting via electronic mail. This variety also concerns the computational tools used in learning: elaborated graphical whiteboards support peer interaction, while more rudimentary text-based discussion forums are used for large group interaction. The series will integrate issues related to CSCL such as collaborative problem solving, collaborative learning without computers, negotiation patterns outside collaborative tasks, and many other relevant topics. It will also cover computational issues such as models, algorithms or architectures which support innovative functions relevant to CSCL systems.

The edited volumes and monographs to be published in this series offer authors who have carried out interesting research work the opportunity to integrate various pieces of their recent work into a larger framework.

Acknowledgements

First of all, we thank the École Polytechnique Fédérale de Lausanne (EPFL) for providing the necessary funds for organizing the CAIF workshop where the idea of this book was first sketched.

We thank all participants of the Collaborative Artefacts and Interactive Furniture workshop (CAIF) held on the 20th, 21st, and 22nd of June 2005 in Château D'Oex, Switzerland: Edith K. Ackermann, Anders-Petter Andersson, David Aymonin, Maribeth Back, Waltraud Beckmann, Jan Borchers, Giovanni Cannata, Birgitta Cappelen, Dana Cho, Régine Debatty, Fabien Girardin, Christophe Guignard, Jean-Baptiste Haué, Jaana Hyvarinen, Tom Igoe, Patrick Jermann, Frédéric Kaplan, Osamu Kato, Karen Johanne Kortbek, Jean-Baptiste Labrune, Saadi Lahlou, Sara Ljungblad, Christophe Marchand, Stefano Mastrogiacomo, Takashi Matsumoto, Mark Meagher, Scott Minneman, Gaelle Molinari, Lira Nikolovska, Nicolas Nova, Chris O'Shea, Amanda Parkes, Thorsten Prante, Roger Ibars, Anural Sehgal, Andrew Sempere, Chia Shen, Ranjan Shetty, Frank Sonder, Peggy Thoeny, Cati Vaucelle, Nicolas Villar, Kevin Walker, Rachna Argawal, Satyendra Nainwal.

Additionally, we thank all anonymous reviewers for providing their feedback to an initial draft of this book.

Finally, we thank Kamni Gill for proofreading the chapters of this book written by authors whose main language is not English.

Contents

1 Introduction: Why Would Furniture Be Relevant for Collaborative Learning?	1
J. Huang, M. Cherubini, N. Nova, and P. Dillenbourg	
2 Design of Systems for Supporting Collaborative Learning Augmented with Physical Artefacts	15
Masanori Sugimoto	
3 Do Fewer Laptops Make a Better Team?	35
Jean-Baptiste Haué and Pierre Dillenbourg	
4 The Disappearing Computer: Consequences for Educational Technology?	59
H. Ulrich Hoppe	
5 Supporting Collaboration with Augmented Environments	77
Saadi Lahlou	
6 Rethinking the Podium	97
Maribeth Back, Surapong Lertsithichai, Patrick Chiu, John Boreczky, Jonathan Foote, Don Kimber, Qiong Liu, and Takashi Matsumoto	
7 Collaborative Tabletop Research and Evaluation	111
Chia Shen, Kathy Ryall, Clifton Forlines, Alan Esenther, Frédéric D. Vernier, Katherine Everitt, Mike Wu, Daniel Wigdor, Meredith Ringel Morris, Mark Hancock, and Edward Tse	
8 Interpersonal Computers for Higher Education	129
Frédéric Kaplan, Son Do Lenh, Khaled Bachour, Gloria Yi-ing Kao, Clément Gault, and Pierre Dillenbourg	

9 Exploratory Design, Augmented Furniture	147
Lira Nikolovska and Edith Ackermann	
Author Index	167
Subject Index	171

Contributors

Edith K. Ackermann is an Honorary Professor of Developmental Psychology, University of Aix-Marseille, currently Visiting Scientist at the Massachusetts Institute of Technology School of Architecture in Cambridge, MA. She teaches graduate students, conducts research, and consults for companies, institutions, and organizations interested in the intersections between learning, teaching, design, and digital technologies. <http://www.media.mit.edu/~edith>

Khaled Bachour has a master's degree in Computer Science from the American University of Beirut. He is currently a Ph.D. student at the Swiss Federal Institute of Technology in Lausanne (EPFL) in the Center for Research and Support for Training and Its Technologies (CRAFT). He is developing, under the supervision of Pierre Dillenbourg and Frederic Kaplan, an interactive table for supporting casual collaborative learning. He is studying different ways of displaying real-time information about the collaborative process to the participants, and is investigating the effect of such shared visualizations on group behaviour.

Maribeth Back is a senior research scientist at the FX Palo Alto Laboratory; prior to that she was a senior research scientist at Xerox PARC. Her current research focuses on the intersection of real and virtual environments, with a bit of ubiquitous computing mixed in. She holds a doctorate from the Harvard Graduate School of Design in computational design, and has a background in professional audio as a recording engineer and theatrical sound designer. Research areas she has worked in include smart environments (real and virtual), multi-modal interface design, ubiquitous computing, new forms of reading and writing, and interactive audio systems design and engineering.

John Boreczky is a member of the Smart Environments project at FXPAL. He has over 16 years of experience in video and related multimedia technology. He received a B.S. and an M.S. degree in Computer Science from the University of Michigan, and is an ABD (all but dissertation) at the University of California at Berkeley. He has authored journal and conference papers in the areas of automotive human factors, computer interface design, and multimedia systems.

Mauro Cherubini is a researcher at Telefonica Research and Development (TID), multimedia group, in Barcelona, Spain. He received a B.A. in Education from

the University of RomaTre, in Rome, Italy, and an M.A. in Education from St. Patrick's College, in Dublin, Ireland. He holds a doctorate from the Computer Science School of the Swiss Federal Institute of Technology in Lausanne. He is interested in tangible interfaces to support learning. <http://www.i-cherubini.it/mauro/>

Patrick Chiu is a senior research scientist at the FX Palo Alto Laboratory. His general research interests lie in multimedia, smart spaces, human-computer interaction, machine learning, visualization, and mathematics.

Pierre Dillenbourg a former teacher in elementary school, graduated in educational science (University of Mons, Belgium). He started his research on learning technologies in 1984. He obtained a Ph.D. in Computer Science from the University of Lancaster (UK), in the domain of artificial intelligence applications for educational software. He has been assistant professor at TECFA, University of Geneva. He joined EPFL in November 2002. His current interests concern computer-supported collaborative learning (CSCL): the design and experimentation of interactive furniture; the effects of awareness tools on group performance and mutual modelling; the authoring of CSCL scripts; the use of eye tracking method for predicting interaction patterns. P. Dillenbourg has been consultant for companies in Switzerland and Europe. He is the editor of the Kluwer Series "Computer-Supported Collaborative Learning" and former president of the International Society for Learning Sciences. <http://people.epfl.ch/pierre.dillenbourg>

Son Do-Lenh is currently a Ph.D. student at Swiss Federal Institute of Technology in Lausanne (EPFL). He obtained his B.Sc. and M.Sc. degree in Computer Science at University of Natural Sciences, Vietnam National University in HoChiMinh City (HCM-UNS) in 2003 and 2007, respectively. During this period, he was also involved in teaching activities at the same school as a teaching assistant and then lecturer. He spent 1 year as a research intern at CRAFT, a HCI and CSCL lab in EPFL, implementing a real-time multi-fingertip detection algorithm for the Docklamp, a portable interactive projector-camera system. His research interests include human-computer interaction and computer-supported collaborative learning. His Ph.D. is about inventing and evaluating new generation of interactive furniture that can be exploited for collaborative learning. <http://people.epfl.ch/son.dolenh>

Alan Esenther is a user interface software developer in the Technology Lab at Mitsubishi Electric Research Laboratories. His research interests include human-computer interaction, finding the right digital tool for the job, and, lately, making multi-user, multi-touch, and large touch surface interactions and development much easier. Alan has an M.S. in Computer Engineering from Boston University. <http://www.merl.com/people/esenther/>

Katherine Everitt is a Ph.D. student in Computer Science at the University of Washington. Her research interests include tabletop interfaces, computer supported cooperative work, and multimodal interfaces. She has an M.S. in Computer Science from the University of California, Berkeley. <http://www.cs.washington.edu/homes/everitt>

Jonathan Foote spent a number of years as a senior research scientist at FXPAL, and is now a consultant in the area of media analysis and interaction. Dr. Foote has more than 60 publications and 15 patents in this area. Dr. Foote's inventions include the TreeQ nonparametric density estimator, Video Manga video summaries, "similarity matrix" media segmentation, the "beat spectrum" method of rhythm analysis, and innovative applications such as automatic music video creation and the first query-by-content search engine for digital music.

Clifton Forlines is a researcher at Mitsubishi Electric Research Laboratories. His research interests include the design and evaluation of novel user interfaces, including digital video presentation; collaborative tabletops; multi-user, multi-display workspaces; and hand-held projectors for augmented reality. Forlines has a Masters of Human-Computer Interaction and a Masters of Entertainment Technology from Carnegie Mellon University and is pursuing a Ph.D. in Computer Science at the University of Toronto. <http://www.cliftonforlines.com>

Graduated in digital design from l'Ecole de design Nantes Atlantique, **Clément Gault** discovered the research field through a work with Frédéric Kaplan on tangible interfaces for robot programming and gestual grammar for multi-finger interfaces. Recently, he designed the interface and movements of Wizkid, a robotic screen which was introduced at the MoMA of New York. He is now working for Orange Labs and beginning a Ph.D. in computer science at Institut de Recherche et de Communication et de Cybernétique de Nantes (IRCCyN) about design and methodology for creating tangible interfaces.

Mark Hancock is a Ph.D. candidate in computer science at the University of Calgary. His research interests include interaction on large display surfaces, with a specific focus on 3D tabletop interaction. Hancock has an M.Sc. in Computer Science from the University of British Columbia. <http://markhancock.ca>

Jean-Baptiste Haué has worked on various projects in a human-centred-design approach. His Ph.D., at the R&D department of EDF (Electricité de France), focused on the formalization of ethnographic knowledge into computer model, within the "Course of Action" framework that was developed by his supervisor Jacques Theureau. During his post-doctoral position at ICLab and the HCI/D-Cog labs (University of California San Diego) with David Kirsch, James Hollan and Ed Hutchins, he worked on collaborative work and studied car driving from a distributed cognition perspective. In the Interactive Table project at EPFL led, he initiated the design of innovative furniture and investigated on collaborative processes, as reported in this volume. Jean-Baptiste Haué is currently leading R&D at Yuseo, a small French company realizing qualitative and quantitative usability studies of computer interfaces. <http://jbh.lautre.net/>

H. Ulrich Hoppe holds a professorship for "Cooperative and Learning Support Systems" in the Department of Computer Science and Applied Cognitive Science of the University of Duisburg-Essen, Germany. With an original background in mathematics and educational technology (PhD from Tübingen University in 1984),

Ulrich Hoppe has been working for about ten years (1984–95) in the area of intelligent user interfaces and cognitive modelling of human–computer interaction, before he re-focused his research on intelligent support in educational systems and distributed collaborative environments. Ulrich Hoppe has been engaged in several European projects in the area of advanced computational technologies in education. He has served as programme co-chair of AIED 2003 in Sydney (Australia) and CSCL 2003 in Bergen (Norway). His current research interests comprise integrated teaching/learning technologies for face-to-face classroom environments, community support tools, as well as learning process modelling. <http://www.collide.info>

Jeffrey Huang is the Director of the Media and Design Laboratory and a Full Professor at the Faculty of Computer and Communications Sciences (I&C), and at the Faculty of Architecture, Civil and Environmental Engineering (ENAC). His research focuses on the intersection of architecture and information systems. His interests include data visualization and the design of digital spaces (three-dimensional navigation interfaces), the integration of physical computing (sensors, actuators, RFID, LEDs, etc.) into architecture and cities, and more generally, design-centred approaches to human–computer interaction (design thinking). <http://people.epfl.ch/jeffrey.huang>

Gloria Yi-Ming Kao received her master degree in Computer Information and Science (2001) from National Chiao-Tung University in Taiwan. After she received her M.S., she worked as a research and development engineer in the wireless networking department of BenQ Corporation for 2 years. In 2007, she participated in research on interactive furniture at CRAFT, a laboratory of the Ecole Polytechnique Fédérale de Lausanne (EPFL). She is a Ph.D. candidate in Computer Science department of National Chiao-Tung University and is currently working on research projects concerning e-learning, creativity, concept maps, agent-assisted learning, and digital game culture. <http://gloriakao.googlepages.com/overview>

Frédéric Kaplan graduated as an engineer of the Ecole Nationale Supérieure des Télécommunications in Paris and received a Ph.D. degree in Artificial Intelligence from the University Paris VI. After 10 years of research at the Sony Computer Science Laboratory in Paris, he supervises now research on interactive furniture and robotic objects at CRAFT, a laboratory of the Ecole Polytechnique Fédérale de Lausanne (EPFL). In his research, he has been exploring technologies permitting to endow objects with a personal history so that they become different as we interact with them and to learn from one another, thus creating an ecosystem in perpetual evolution. In parallel with his investigations in artificial intelligence, he collaborates with developmental psychologists, ethologists, neuroscientists and designers. His researches are published in international scientific journals of these different fields and some of his machines and robots have been exhibited in museums around the world, including the Museum of Modern Art in New York and the Centre Pompidou in Paris. He also authored two popular science books in French “La naissance d’une langue chez les robots” (the birth of a language among robots) (Hermès, 2001) and

“Les machines apprivoisées: comprendre les robots de loisir” (Tamed machines: understanding entertainment robots) (Vuibert, 2005). <http://www.fkaplan.com>

Don Kimber is a senior research scientist at FXPAL, working with sensor network systems, mixed reality, and virtual environments. Before coming to FXPAL he was a member of the research staff at Xerox PARC.

Saadi Lahlou is a social psychologist, he worked on social representations, text mining and consumer behaviour. For the last 15 years, he has been analyzing the determinants of human behaviour in real settings and “natural experiments” in industry, with protocols using digital ethnography and video, including the subcam, a miniature video-camera worn at eye-level by users. Saadi Lahlou heads the Laboratory of Design for Cognition at EDF R&D, and is associate research director at CNRS-EHESS/IIAC/ Centre for Transdisciplinary Studies. He is the scientific director of the Cognitive Technologies research program at Fondation Maison des Sciences de l’Homme since 1998. <http://www.iiac.cnrs.fr/cetsah/>

Surapong Lertsithichai is a designer and professor at Silpakorn University in Bangkok, Thailand. He holds a doctorate from the Harvard Graduate School of Design where his dissertation focused on tangible interfaces and tools for computer-aided design.

Qiong Liu received his Ph.D. degree in computer science from the University of Illinois at Urbana-Champaign (UIUC) in 2001. He received his M.S. in precision instruments from Tsinghua University, Beijing, and his B.S. in biomedical engineering and instrument science from Zhejiang University, Hangzhou, China. Now, he is a senior research scientist at the FX Palo Alto Laboratory in the Immersive Conferencing and Interactive Media teams. His current research interests include immersive conferencing, image/video/audio processing, multimedia, computer vision, machine learning, human–computer interaction, and robotics.

Takashi Matsumoto is a designer working in a Ph.D. course at Keio University Media Design. His research field is an integrated design of tangible objects and ubiquitous computing. He has been designing unique digital gadgets for a network era.

Meredith Ringel Morris is a researcher in the Adaptive Systems and Interaction group at Microsoft Research. She earned her Ph.D. in Computer Science from Stanford University, and her Sc.B. in Computer Science from Brown University. Her main research interests are human–computer interaction and computer-supported cooperative work. More details about Merrie’s research can be found at <http://research.microsoft.com/~merrie>

Lira Nikolovska is an interaction designer and architect. She works at Autodesk in the Revit Emerging Products and Technologies team. She has worked for the Strategic Design department at Philips Design in The Netherlands and taught at RISD Furniture and Textiles departments. She holds a Ph.D. in Computation from MIT Architecture and is SIGGRAPH 2008 Chair of Curated Art. <http://liranikolovska.com>

Nicolas Nova is a User Experience and Foresight researcher at the LIFTlab think tank. His work is about studying how people use various technologies and turn them into insights, ideas, prototypes or recommendations to inform design and foresight. He is interested in various fields such as mobility, urban environments, digital entertainment and new interfaces. He is also part of the near future laboratory. <http://www.liftlab.com/think/nova/>

Kathy Ryall is currently a principal research scientist at BAE Systems Advanced Information Technologies (AIT). Prior to joining AIT she has held positions at MERL, Xerox, DEC, AT & T Bell Laboratories, Harvard University and the University of Virginia. Her main research interests are in human–computer interaction, computer-supported cooperative work, and information visualization. Ryall earned a Ph.D. in computer science from Harvard University and is a senior member of both the IEEE and the ACM. Contact her at ryall@acm.org

Chia Shen is a Senior Research Scientist at MERL in Cambridge, MA, where she served as Associate Director of the Research Lab from 2003 to 2006. She currently is also a Visiting Senior Scientist at the IIC@Harvard. DiamondSpin (<http://www.diamondspin.org>), developed at MERL under her direction during 2001–2003, is the first open toolkit made available to the tabletop research community for the construction of experimental multi-user tabletop applications. Her co-authored paper on the PDH (Personal Digital Historian), a tabletop story-sharing system, has been ranked as the most cited paper for the 2002 ACM CSCW. She was Conference Chair of the 20th ACM UIST 2007. Dr. Shen is on the Editorial Board of ACM Computers in Entertainment, as well as the Steering Committee of the IEEE Workshop on Tabletop and Interactive Surfaces.

Masanori Sugimoto received B.Eng., M.Eng., and Dr.Eng. degrees from University of Tokyo, Japan, in 1990, 1992, and 1995, respectively. He is an associate professor in the Department of Frontier Informatics, Graduate School of Frontier Sciences, University of Tokyo. His research concern is related to human–computer interaction, especially mixed reality, mobile and ubiquitous computing, human–robot interaction, computer supported collaborative work/learning, and so on. Dr. Sugimoto is a member of ACM, IEICE, ISLS, IEICE, JSAI, IPSJ, VRSJ, and JCSS. <http://www.itl.t.u-tokyo.ac.jp/>

Edward Tse is an Alberta Ingenuity R&D Associate and Project Research Leader at Smart Technologies. His Ph.D., from the University of Calgary, specialized in natural interaction over large digital displays where he collaborated with researchers at Smart Technologies and Mitsubishi Electric Research Laboratories. His research interest is supporting the speech and gesture actions that people naturally do when working together over large surfaces. For more information visit <http://www.EdwardTse.com>

Frédéric Vernier is an assistant professor in the Department of Computer Science, University of Paris Sud in France working at the LIMSI-CNRS laboratory. His research interests include Human-Computer Interaction and Interactive Visualization.
