# Foreword

Significant development in medical diagnosis and therapy, observed in recent years, is undoubtedly connected with the development of computer systems of information processing on the basis of the improvement of technology and construction of electronic devices, application of theory and appropriate algorithms as well as development of tools used in the software development process. Possible benefits obtained in all branches of medicine are unquestionable.

The progress of civilization results in an increase of the disease rate in musculoskeletal and cardiovascular systems, tumours being predominant in medical statistics. Furthermore, factors concerning aging of population, traffic accidents, sports activity, in particular extreme sports, demand modern medical techniques and technologies. The solution of complex problems concerning diagnostics and medical therapy is possible thanks to the development of interdisciplinary cooperation of experts from diverse branches of medical and engineering fields. The engineering knowledge defined as biomedical engineering is covering biosystems, biomaterials, biomechanics and rehabilitation engineering, biomedical imaging as well as computer and telemedicine systems, neural networks and medical physics.

The development of biomedical engineering undoubtedly reflects the present state of the art and knowledge of biological reality. Mainly, it depends on the application of new cognitive and diagnostic methods that use the latest achievements from the field of natural sciences and technology.

Issues concerning biomedical engineering are actively developed in many scientific and clinical centres all over the world, which is manifested by a stream of reports, publications and papers. Thus, their periodic analysis and synthesis is required. In consequence, comprehensive studies enriching the present state of the art are published. The studies will be useful in the

arrangement of knowledge and its application, in the production of medical devices and the elaboration of innovative diagnostic and therapeutic procedures in clinical practice. The papers presented in this book are pursuing the above denoted aims.

Gliwice, June 2010

Jan Marciniak

# Preface

Information Technology in Biomedicine is an interdisciplinary research area, that bridges the gap between methodological achievements in engineering and clinical requirements in medical diagnosis and therapy. It is an emerging field focusing on collaboration between physicians, scientists, and technicians in order to define and meet patients needs. Many of these areas are recognized as research and development frontiers in employing new technology in clinical environment. These include image-guided diagnosis and treatment, biotechnology, biomaterials, biometrics, telemedicine and home care. New approaches to information technologies increase the efficiency of medical diagnostic and treatment and permit more information to be extracted from the acquired data. In this book, members of the academic society of technical and medical background present their research results and clinical implementation in order to satisfy the functional requirements of authorized physicians for the benefit of the patients.

An extended area is covered by the articles. It includes biomedical signals, medical image processing, computer-aided diagnosis and surgery, biometrics, healthcare and telemedicine, biomechanics, biomaterials, bioinformatics. Section on bronchoscopy presents the basis as well as new research studies performed in this field. Papers present various theoretical approaches and new methodologies based on fuzzy sets, mathematical statistics, mathematical morphology, fractals, wavelets, syntactic methods, artificial neural networks, graphs and many others.

We would like to express our gratitude to all paper reviewers as well as the authors who have contributed their original research papers.

Gliwice,  
June 2010

# Contents

## Part I: Image Processing and CAD

<b>On a Hybrid Fuzzy Clustering Method</b> .....	3
<i>Tomasz Przybyła, Janusz Jeżewski, Dawid Roj</i>	
1 Introduction .....	3
2 Generalized Cost Function .....	4
2.1 Weighted Myriad .....	4
2.2 Weighted Meridian .....	6
2.3 Generalized Cost Function .....	8
3 Hybrid Clustering Method .....	10
3.1 Data Clustering with the Hybrid Clustering Method .....	11
4 Numerical Experiments .....	12
5 Conclusions .....	13
References .....	14
<b>Complete Gradient Clustering Algorithm for Features Analysis of X-Ray Images</b> .....	15
<i>Małgorzata Charytanowicz, Jerzy Niewczas, Piotr Kulczycki, Piotr A. Kowalski, Szymon Łukasik, Sławomir Zak</i>	
1 Introduction .....	15
2 Complete Gradient Clustering Algorithm (CGCA) .....	16
2.1 Kernel Density Estimation .....	16
2.2 Procedures of the CGCA .....	18
3 Materials and Methods .....	19
4 Results and Discussion .....	20
5 Conclusions .....	23
References .....	24

<b>Dynamics of the Clusterization Process in an Adaptive Method of Image Segmentation</b> . . . . .	25
<i>Aleksander Lamża, Zygmunt Wróbel</i>	
1 Introduction . . . . .	25
2 Definitions and Fundamentals . . . . .	26
3 Segmentation Algorithm . . . . .	26
3.1 Generating the Initial Set of Clusters . . . . .	27
3.2 Merging the Clusters . . . . .	27
3.3 Adaptation of the Threshold Variance . . . . .	28
3.4 Dynamics of the Merging Process . . . . .	30
4 Conclusions . . . . .	32
References . . . . .	32
<b>Application of Adaptive Weighed Averaging to Digital Filtering of 2D Images</b> . . . . .	33
<i>Alina Momot</i>	
1 Introduction . . . . .	33
2 Weighted Averaging Methods . . . . .	35
2.1 EBWA Method . . . . .	35
2.2 Adaptive Linear Spatial Filtering . . . . .	36
3 Numerical Experiments . . . . .	37
3.1 Experiments with Salt-and-Pepper Noise . . . . .	37
3.2 Experiments with Gaussian Noise . . . . .	40
4 Conclusions . . . . .	44
References . . . . .	44
<b>Photodynamic Image e-Atlas in Diagnostic and Treatment Procedures</b> . . . . .	45
<i>Ewa Pietka, Aleksander Sieron, Dominik Spinczyk, Przemysław Szabelak, Sebastian Kwiatek, Jakub Murawski</i>	
1 Introduction . . . . .	45
2 Acquisition Module . . . . .	46
3 Image Archive and Presentation Module . . . . .	46
4 Computer Aided Diagnosis and Therapy . . . . .	49
5 Results . . . . .	51
6 Summary . . . . .	52
References . . . . .	52
<b>Multiseries MR Data in Brain Tumours Segmentation</b> . . . . .	53
<i>Jacek Kawa, Paweł Szwarz, Barbara Bobek-Billewicz, Ewa Piętka</i>	
1 Introduction . . . . .	53
1.1 Brain Tumours . . . . .	54
1.2 Nature of MR Imaging Data . . . . .	54
1.3 Brain Tumour Segmentation Approaches . . . . .	55
2 Segmentation Algorithm . . . . .	55

2.1	Segmentation of Contrast Enhanced T1W Series .....	56
2.2	Perfusion Maps Analysis .....	57
3	Results .....	59
4	Conclusions .....	63
	References .....	63
